Input/Output port	HDMIx1 ; Micro USBx1
Dimensions	85.0(L)X36.5(W)X9.0(H)mm
Weight	29g
Power	5V 500mA
Consumption	Almost 2.5W

- ◎ iPush2TV V5
- ◎ Micro USB cable
- ◎ HDMI cable (option)
- ◎ User Manual

- ① Button M: short press and long press for two functions:

● Short Press:

These are THREE modes are switched with cycle by short pressing the button. The factory default setting is "DLNA mode" and then followed with "Miracast PBC mode" and "Miracast PIN Mode". Short pressing button one time will switch to "Miracast PBC mode". The screen will show "Press again to switch to Miracast PBC mode".

Please follow the instruction to press the button one more time for reconfirmation to switch Miracast PBC mode. Keep pressing the button if you need to switch the mode by following the information shown on the screen.

● Long Press :

Recover to factory default setting. Press M button for 5 seconds until it appears "Factory Default" on the top left corner of the screen. Once the default setting is completed, iPush2TV will restart.

**Note: Resetting will delete all your saved network connection data , so this function is not suggested to use unless in need.**

② Button R: To shut down and restart the application in the iPush2TV V5

**Note: If errors occur during application, press R button to quit and restart.**

- ③ Micro USB Port: For power supply from the USB cable.
- ④ HDMI connector: For connection to TV, projector and HDMI compatible display.
- ⑤ LED Indicator: Yellow led for active status

© Device Preparation:

1. Smartphone, tablet or laptop computer

**Note: hardware must capably support wireless network, 802.11 b/g/n. For computer, the OS must be Windows 7 or above.**

2. Wi-Fi Router

**Note: a) Please use WiFi-router which capably supports 802.11 b/g/n and 300Mbps above for better connection.**

**b) To make sure your smartphone, tablet, laptop and iPush2TV are closer enough to the WiFi-router. Please try to avoid areas that have a lot of noise or interruption from surrounding wireless signals.**

3. Micro USB cable

4. TV, monitor or projector which are

compatible with HDMI.

5. If your TV, monitor or projector does not support USB device, please prepare a 5V/ 0.5A AC adapter with USB port for power supply.

1.Under DLNA mode before using iP-ush2TV, please install the free JoyLink APP. There are two versions of software for installation on Windows 7 and Android OS. Please refer to the correct software according to your OS.

a)You may download from Google Play by searching JoyLink APP. Please refer to the QR Code to the right.

b)Or go to our website [www.firstsing.com](http://www.firstsing.com) to download software for installation, please refer to the QR Code to the right.

**Note: If the smartphone or tablet installed IOS system (such as iphone or ipad), do not need to install any software before using iPush2TV.**

2.Under Miracast mode, do not need to install any software before using iPUSH2TV.

① Connection of devices

Plug iPush2TV into the HDMI port of TV, monitor or projector, or connect with HDMI connector.

② Power connection

Please take out the Micro USB cable from the package, plug the Micro USB connector into iPush2TV. Then, plug the other side of USB connector into the USB port of the TV, monitor or projector. If your TV, monitor or projector does not have a USB port, please prepare a 5V power adapter with USB port for power supply.

③ Select correct HDMI input from the TV, monitor or projector.

④ The screen will show a video and then enter to the main page.

**Note: Please parallel plug iPush-2TV into the TV, monitor or projector. Vertical direction of iPush2TV to the TV, monitor or projector will lead to shielding effect and cause the poor Wi-Fi signal and connection.**

©Setup: Please turn on the Wi-Fi on your device (smart phone, tablet and computer) before start setting. Click "iPush2TV\*\*\* " to start connection.

There are two modes of connection:

- a) Virtual AP only Mode: To share multimedia content from your smartphone, tablet and laptop to the TV, monitor or projector without home network.
- b) Bridge to wireless Mode: In this mode, you can share web videos or TV program on a larger display; meanwhile, your smartphone, tablet and laptop can be used to do other things.

- Virtual AP only mode setup:
  - a) DLNA operate interface:

Once your device (smartphone, tablet and computer) is connected to iPush2TV, the setup is done, open your JoyLink APP, then you can start to stream multimedia content from your device to TV, monitor or projector.

- Note: Suggestions on the selection of the mode of "Virtual AP only" of video sharing, because the better transmission performance.**
- b) Miracast PBC operation interface:

you just need to launch Miracast feature which is under Wi-Fi setup on your device, then you can mirror what is on your smartphone or tablet screen to big screen of the TV, monitor or projector.

**Note: the function of screen mirroring only available to mobile, portable devices which support WIFI CERTIFIED Miracast. The brands information of which will be regularly updated on website “[www.firstsing](http://www.firstsing.com)**

**.com”. Comparing with Miracast PBC, Miracast PIN has an extra password settings, other settings in the same way.**

● Bridge to Wireless Mode Setup:  
This setup must be under DLNA operate interface, and there are two ways for setup. One is through the Web browser; Another is through JoyLink APP. Setup as follows:

a) Please double check your device (smartphone, tablet and laptop) to make sure it's connected to iPush2TV, then open the web browser and type the IP address "http://192.168.59.254/remote" which is shown on the main page. Please see right side the QR Code. Or by JoyLink

APP to access a virtual remote controller, click **【Setup】** button for Settings.

b) It appears a Virtual Remote Controller on the screen, please click **【Wifi setup】** at the bottom right corner, access "Wireless LAN setup" and then choose your router. If you can't find out the router you want, click "Re-Scan AP" to research. Choose correct router to enter the password of Wifi router and then tab "submit" for setup successfully.

c) The iPush2TV will quit automatically, restart and then connect to the Wifi router. The main page will show the connection to the router is ready. Which means product has been entered to "Bridge to Wireless Mode".

### ● How to Playback

1. Under DLNA mode and Android OS: select the photo, music or video which you want to play from your device, then tap "Menu" for options of "Play now", "Add to queue", "Select all" or "Unselect all". If you choose "Play now", the selected multimedia content will be streamed and played directly on TV, monitor or projector.

2. Under DLNA mode and Windows 7 OS: You can drag PC's photo, music or video to the location of the JoyLink playback folder "Photo/Music" or "Video". By accessing folder and choosing "Play now", the selected files will be streamed and played directly on TV, monitor or projector.

Please open the web browser with DLNA operate interface and tape in "<http://192.168.59.254/remote>" which

is shown on the main page. Please see on the right side the QR Code; Or by JoyLink APP to access a virtual remote controller, click **【Setup】** button for settings:

© Network Setup: There are four options under Network "Device name", "Virtual AP Bridge", "Wireless LAN Setup", "Virtual AP Setup"

● **【Device Name】** : The default device name can be renamed with the keyboard on screen.

● **【Virtual AP Bridge】** : Option for "Virtual AP only" Mode or "Bridge to wireless" Mode.

**Note: Any change of Setup will cause the disconnection of Wi-Fi and restart. Please quit the setting page and JoyLink re-connect iPush2TV and proceed with setup and playback.**

● **【Wireless LAN Setup】** : Please choose **【 Virtual AP Bridge 】** from "Bridge to wireless" before processing setup.

a) click **【Wireless LAN Setup】** , access the selected wireless route, it will appear the password login box.

b) Enter the password with the remote controller on the main page, click OK to finish setup. The iPush2TV will test network connection automatically, and the image of "wireless LAN test success" will appear on the screen.

c) After the iPush2TV reboot automatically, the main page will show connection to router is ready.

**Note: commonly there are two encryption methods that most routers support: WPA and WEP, for WPA, after access the selected route, the password login box will appear, for WEP there will be options for Hex Code and Ascii after access the selected route, the default Mode is Hex Code.**

● **【Virtual AP Setup】** : As this setup require password entering each time of connections and using of this product. So we do not recommend you to use.

a) Click to select **【Wireless Security】** , access options for **【Open System】** and **【WPA Key】** , click **【WPA Key】** , **【Password】** , enter the password of wireless AP and click OK .

b) Access **【Region】** , select protected region.

c) Click **【Save Change】** iPush2TV will quit automatically, restart and reconnect.

ect then the password is set.

◎ **Audio Setup:** There are 3 options for Audio setting, "Night Mode", "HDMI Output", "Lip Sync (HDMI A/V Sync)". The setting can be made according to the device and demand.

● **【Night Mode】** : To control the annoying volume.

● **【HDMI Output】** : Setting correct HDMI audio output according to your device.

a) HDMI LPCM: Decoding audio, output digital analogy of 2 channels.

b) HDMI RAW: To stream the Original bit stream with audio output to the connected HDMI device. The HDMI device must have the decode ability, such as A/V amplifier, in order to have the right sound.

c) HDMI AUTO: factory default setting.

● **【HDMI A/V Synchronization】** : the unit of measurement is millisecond.

◎ **【Video Setup】** : There are 4 options for "Aspect Ratio", "TV system", "Scale Video Output to 90%", "1080P 24Hz". Setting can be made according to actual device and demand.

● **【Aspect Ratio】** : Select the best display ratio for your TV, monitor or projector. The default aspect is 16:9 wide screen.

a) Pan Scan 4:3: Trim the original 16:9 screen, retrieve the middle part and play on a 4:3 screen. It's recommended to choose this proportion if use a standard 4:3 display.

b) Letter Box 4:3: without any retrieve of screen, but just compress the width of screen. It's recommended to choose

this proportion if use a standard 4:3 TV.

c) 16:9: It's recommended to use this ratio of use 16:9 wide screen TV.

d) 16:10: It's recommended to choose this proportion if you have a 16:10 wide TV.

● **【TV System】** : Select the suitable resolution based on the display ability of your TV, monitor or projector.

● **【Scale Video Output to 90%】** : Select to enable screen shrinking.

● **【1080P 24Hz】** : Use this function to select the resolution of display. If your image is 1080P 24Hz, it's recommended to open this function and it will provide the best display resolution.

◎ System Setup: There are 5 options

for **【Language setting】**, **【Factory Default】**, **【VersionInfo】**, **【Online Upgrade】**, **【USB Upgrade】**. Setting can be made according to the device and demand.

● **【Language】** : To select the language for operation.

● **【Factory Default】** : To return original default.

● **【Version Info】** : To show the related information of iPush2TV.

● **【Online Upgrade】** : To get the software and upgrade by network.

● **【USB upgrade】** : To get the software and upgrade by USB Device

**Note: You have to change to "Bridge to wireless Mode" when updating online. It takes about 5 minutes to upgrade. Please don't switch off the power when upgrading online. After the upgrade is finished, the system will reboot to the main menu.**

If you have any problem when using iPush2TV, the following steps will help to solve the problem.

Q: A black screen if the iPush2TV is connected to TV?

A: Please do the following:

1. Check if the yellow LED on iPush2TV is on or not. If not, check the connection status of the Micro USB cable.
2. Check if the HDMI cable is well connected to devices and display.
3. Check if the HDMI input setting is correct.

Q: Cannot find the device you want to play with JoyLink APP?

A: Please check if iPush2TV in smartphone, tablet and computer is selected and connected to iPush2TV.

Q: Can't playback the content to the TV, monitor or projector in real time on Bridge to wireless Mode?

A: It takes more time to stream the large content and please wait for few seconds. Please check if your Internet bandwidth is smooth and wireless device is not interfered by the environment or other wireless devices.

Q: Some media file formats can't be played?

A: Some multimedia content formats are not supported and please refer the specifications.

Q: iPush2TV DMR is not be found on the device list?

A: To make sure the iPush2TV and your smartphone, tablet and laptop is connected in same network area. Or please close the Wi-Fi and restart WiFi again.

Q: It's suddenly stopped at playing movie?

A: iPush2TV has better performance with strong Wi-Fi signal. When the signal is not good or be disturbed, the screen display "Worse Wireless Environment Stop Playback", the playing will be stopped for about 5 seconds and then return to the main menu. The performance of iPush2TV depends on the environment. To get the best connection performance, make sure your devices are closer enough to the wireless routes. In addition, please also try to avoid areas that have a lot of noise or interruption from surrounding wireless signals.

Q: iPush2TV keeps repetitive starting when powered on?

A: Please check if the USB cable was recommended by the manufacturer, there is some cable (usually slender) in the market is not qualified, it's with larger resistance and cause iPush2TV can not reach the starting voltage, then it appears repetitive starting.
